NOTEs: [a] PSO Native load includes PSO load on GRDA

<sup>[</sup>b] GRDA and PSO enjoy a grandfathered load swap arrangement. Historically, both PSO load on GRDA and GRDA load on PSO were included in the PSO OATT load responsibility (Schedule 9). Beginning in Dec 2015, loads are telemetered - AEP and GRDA mutually agreed to report only their own load telemetered from the other zone for purposes of both Sch 9 & 11. Therefore, for Dec 2015 and forward, PSO will only report PSO load on GRDA for both Sch 9 & 11 reporting purposes as agreed to with GRDA. Also, for Schedule 11 purposes, in agreement w/SPP & GRDA, PSO will report the PSO load on GRDA in Schedule 11 while GRDA will report its load on PSO in its Schedule 11 values for the entire year.

<sup>(</sup>c) OG&E Atoka and Coalgate merged under 1 TSR (OG&E LSE) beginning with September 2018 billing. SPP required the merged loads to be reported for Jan - Dec 2018

<sup>[4]</sup> PSO Native load includes PSO load on GRDA

<sup>(5)</sup> SWEPCO Native Load includes Valley

AEP West SPP Member Transmission Companies
Transmission Cost of Service Formula Rate
Utilizing Actual / Projected Cost Data for the 2020 Rate Year

AEP OKLAHOMA TRANSMISSION COMPANY, INC.

<u>.etter</u>	<u>Notes</u>
	General Note: True Up References to data from FERC Form 1 are indicated as: page#.line#.col.#. Rate Year Projections from Company forecasts.
Α	The revenue credits shall include a) amounts received directly from the SPP for PTP transmission services, b) direct assignment charges for transmission facilities, the cost of which has been included in the TCOS, and c) amounts from customers taking service under grandfathered agreements, where the demand is not included in the rate divisor. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or facilities excluded from the TCOS are not included as revenue credits. Revenue from Transmission Customers whose coincident peak loads are included in the DIVISOR of the load-ratio share calculation are not included as revenue credits. See Worksheet H for details.
В	The annual and monthly net plant carrying charges on page 1 are used to compute the revenue requirement for facilities and any upgrades.
С	This additional revenue requirement is determined using a net plant carrying charge (fixed carrying charge or FCR) approach. Worksheet G shows the calculation of the trued-up revenue requirement for each project, based on an FCR rate calculated from inputs on this TCOS. Line 13 shows the incremental ARR for projects receiving incentives as accepted by FERC. These individual additional revenue requirements are summed for the true-up year, and included here.
D	The gross plant, accumulated depreciation, and deferred tax balances included in rate base and depreciation expense are reduced by the removal of amounts related to Asset Retirement Obligations (AROs). This is to comply with the requirements of
E	The total-company balances shown for Accounts 281, 282, 283, 190 only reflect ADIT that relates to utility operations. The balance of Account 255 is reduced by prior flow throughs and is completely excluded if the utility chose to utilize amortization of tax credits against FIT expense as discussed in Note N. An exception to this is pre-1971 ITC balances, which are required to be taken as an offset to rate base. Account 281 is not allocated to transmission. Transmission allocations are shown on Worksheet C.
F	Identified as being transmission related or functionally booked to transmission.
G	Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission on line 70.
Н	Consistent with Paragraph 657 of Order 2003-A, the amount on line is equal to the balance of IPP System Upgrade Credits owed to transmission customers that made contributions toward the construction of System upgrades, and includes accrued interest and unreturned balance of contributions. The annual interest expense is included on line 113.
1	Line 65 Removes the expense booked to transmission accounts included in the development of OATT ancillary services rates, including all of Account No. 561.
J	Removes cost of transmission service provided by others to the extent such service is not incurred to provide the SPP service at issue.
K	General Plant and Administrative & General expenses may be functionalized based on allocators other than the W/S allocator. Full documentation must be provided.
L	Expense reported for these A&G accounts will be included in the cost of service only to the extent they are directly assignable or allocable to transmission service. Worksheet J allocates these expense items. Acct 928 Includes Regulatory Commission expenses itemized in FERC Form-1 at page 351, column H. FERC Assessment Fees and Annual Charges shall not be allocated to transmission. Only safety-related and educational advertising costs in Account 930.1 are included in the TCOS. Account 930.2 includes the expenses incurred by the transmission function for Associated Business Development revenues given as a credit to the TCOS on Worksheet H.
М	
	Recoverable PBOP expense is based on actual annual PBOP costs, including charges from the AEP Service Corporation. The PBOP amounts are included in the Administrative and General total, and are based on current year expenses. The annual PBOP costs, including charges from the AEP Service Corporation. The PBOP amounts are included in the Administrative and General total, and are based on current year expenses. The annual PBOP costs, including charges from the AEP Service Corporation.
N	Includes only FICA, unemployment, property and other assessments charged in the current year. Gross Receipts tax, Sales & Use taxes, local franchise taxes, and taxes related to income are excluded.
0	The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) (In 99) multiplied by (1/1-T). If the applicable tax rates are zero enter 0.  Inputs Required:  FIT =  SIT=  SIT
	p = 0.00% (State income tax Rate of Composite Str. Worksheet R)  (percent of federal income tax deductible for state purposes)
	Excess / (Deficit) Deferred Income Taxes will be amortized over the average remaining life of the assets to which it relates, unless the Commission requires a different amortization period. Recovery of permanent and flow through differences is limited
Р	The Texas Gross Margin tax is calculated on the Texas allocated revenue of the Company, reduced by cost of goods sold deduction to derive a "Gross Margin" for the Company. The tax rate of one percent is assessed on the resulting amount. The jurisdictional allocator is based on transmission demand allocators.
Q	Removes plant excluded from the OATT because it does not meet the SPP's definition of Transmission Facilities or is otherwise ineligible to be recovered under the OATT.
R	Removes transmission plant (e.g. step-up transformers) included in the development of OATT ancillary service rates and not already removed for reasons indicated in Note Q.
S	Includes functional wages & salaries incurred by parent company service corporation for support of the operating company.
Т	Long Term Debt cost rate = Long-Term Interest (In 132) / Long Term Debt (In 141). Preferred Stock cost rate = preferred dividends (In 133) / preferred outstanding (In 142). Common Stock cost rate (ROE) = 10.5%, the rate accepted by FERC pursuant to the settlement filed in Docket Nos. EL17-76 and EL18-199. It includes an additional 50 basis points for remaining a member of the SPP RTO. The capital structure of AEP Southwestern Transmission Co. will be based on the capital structure of SWEPCO until it establishes a stand alone capital structure. AEP Oklahoma Transmission Company uses its own capital structure.
	The amount of eligible hedging gains or losses included in total interest expense is limited to five basis points of the capital structure. Details and calculations of the weighted average cost of capital are shown on Worksheet M. Eligible Hedging Gains
U	The cost of service will make a rate base adjustment to remove unfunded reserves associated with contingent liabilites recorded to Accounts 228.1-228.4 from rate base.
V	O&M and A&G shall be adjusted to remove all regulatory asset deferrals and amortizations that have not been approved by FERC for inclusion in cost of service, and then to add back in FERC approved amortizations and deferrals. Negative amounts

If the company submits a Section 205 filing proposing to make adjustments to this formula rate cost of service template to remove assets and costs related to transmission facilities constructed and operated specifically for the purpose of delivering the

<sup>\*\*</sup> This is the calculation of additional incentive revenue on projects deemed by the FERC to be eligible for an incentive return. This additional incentive requirement is applicable for the life of this specific project. Each year the revenue requirement calculated for SPP should be incremented by the amount of the incentive revenue calculated for that year on this project.

Actual / Projected 2020 Rate Year Cost of Service Formula Rate

Worksheet G - Calculation of TRUED-UP Annual Revenue Requirement for Base Plan and Special-Billed Projects AEP OKLAHOMA TRANSMISSION COMPANY, INC.

#### Calculate Return and Income Taxes with 0 basis point ROE increase for Projects Qualified for Incentive. <u>Line</u> .

#### <u>Number</u> A. Determine 'R' with hypothetical 0 basis point increase in ROE for Identified Projects

1	ROE w/o incentives (TCOS, In 143)		10.50%	
2	Project ROE Incentive Adder (Ente	r as whole number)		- basis points
3	ROE with additional 0 basis point in	ncentive		10.50% <==Incentive ROE
4	Determine R (cost of long term del	ot, cost of preferred	stock and percent is from T	COS, Ins 141 through 143)
5		<u>%</u>	<u>Cost</u>	Weighted cost
6	Long Term Debt	45.35%	4.08%	1.85%
7	Preferred Stock	0.00%	0.00%	0.00%
8	Common Stock	54.65%	10.50%	<u>5.74%</u>
9			R =	7.59%

### B. Determine Return using 'R' with hypothetical 0 basis point ROE increase for Identified Projects.

10	Rate Base (TCOS, In 63)	742,016,705
11	R (from A. above)	0.0759
12	Return (Rate Base x R)	56,295,905

#### C. Determine Income Taxes using Return with hypothetical 0 basis point ROE increase for Identified Projects.

13	Return (from B. above)	56,295,905
14	Tax Rate (TCOS, In 99)	25.47%
15	EIT=(T/(1-T)) * (1-(WCLTD/WACC)) =	25.85%
16	Income Tax Calculation (Return x EIT)	14,550,773
17	ITC Adjustment (TCOS, In 108)	-
18	Excess DFIT Adjustment (TCOS, In 109)	871,277
19	Tax Effect of Permanent and Flow Through Differences (TCOS, In 110)	253,699
20	Income Taxes	15,675,748

# 11. Calculate Net Plant Carrying Charge Rate (Fixed Charge Rate or FCR) with hypothetical 0 basis point **ROE** increase.

Net Revenue Requirement (TCOS, In 117)	124,188,219
Return (TCOS, In 112)	56,295,905
Income Taxes (TCOS, In 111)	15,675,748

21	Net Revenue Requirement (TCOS, In 117)	124,188,219
22	Return (TCOS, In 112)	56,295,905
23	Income Taxes (TCOS, In 111)	15,675,748
24	Gross Margin Taxes (TCOS, In 116)	-
25	Net Revenue Requirement, Less Return and Taxes	52,216,567

A. Determine Net Revenue Requirement less return and Income Taxes.

#### B. Determine Net Revenue Requirement with hypothetical 0 basis point increase in ROE. Net Revenue Requirement, Less Return and Taxes

20	Not November Requirement, 2000 Retain and Taxes	02,210,007
27	Return (from I.B. above)	56,295,905
28	Income Taxes (from I.C. above)	<u>15,675,748</u>
29	Net Revenue Requirement, with 0 Basis Point ROE increase	124,188,219
30	Gross Margin Tax with Basis Point ROE Increase (II C. below)	
31	Revenue Requirement w/ Gross Margin Taxes	124,188,219
32	Less: Depreciation (TCOS, In 86)	30,287,906
33	Net Rev. Req, w/0 Basis Point ROE increase, less Depreciation	93,900,314

#### C. Determine Gross Margin Tax with hypothetical 0 basis point increase in ROE. Net Revenue Requirement before Gross Margin Taxes, with 0

	<u> </u>

CUMMULATIVE HISTORY OF TRUED-UP ANNUAL REVENUE REQUIREMENTS:

LIFE OF THE PROJECT.

INPUT TRUE-UP ARR (WITH & WITHOUT INCENTIVES) FROM EACH PRIOR YEAR TEMPLATE BELOW TO MAINTAIN HISTORY OF TRUED-UP ARRS OVER THE

Project Totals 1,035,552

\*\* This is the total amount that needs to be reported to SPP for billing to all regions.

<sup>\*\*</sup> This is the calculation of additional incentive revenue on projects deemed by the FERC to be eligible for an incentive return. This additional incentive requirement is applicable for the life of this specific project. Each year the revenue requirement calculated for SPP should be incremented by the amount of the incentive revenue calculated for that year on this project.

AEP SOUTHWESTERN TRANSMISSION COMPANY

<u>etter</u>	Notes  General Note: True Up References to data from FERC Form 1 are indicated as: page#.line#.col.#. Rate Year Projections from Company forecasts.
A	The revenue credits shall include a) amounts received directly from the SPP for PTP transmission services, b) direct assignment charges for transmission facilities, the cost of which has been included in the TCOS, and c) amounts from customers taking service under grandfathered agreements, where the demand is not included in the rate divisor. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or facilities excluded from the TCOS are not included as revenue from Transmission Customers whose coincident peak loads are included in the DIVISOR of the load-ratio share calculation are not included as revenue credits. See Worksheet H for details.
В	The annual and monthly net plant carrying charges on page 1 are used to compute the revenue requirement for facilities and any upgrades.
С	This additional revenue requirement is determined using a net plant carrying charge (fixed carrying charge or FCR) approach. Worksheet G shows the calculation of the trued-up revenue requirement for each project, based on an FCR rate calculated from inputs on this TCOS. Line 13 shows the incremental ARR for projects receiving incentives as accepted by FERC. These individual additional revenue requirements are summed for the true-up year, and included here.
D	The gross plant, accumulated depreciation, and deferred tax balances included in rate base and depreciation expense are reduced by the removal of amounts related to Asset Retirement Obligations (AROs). This is to comply with the requirements of
E	The total-company balances shown for Accounts 281, 282, 283, 190 only reflect ADIT that relates to utility operations. The balance of Account 255 is reduced by prior flow throughs and is completely excluded if the utility chose to utilize amortization of tax credits against FIT expense as discussed in Note N. An exception to this is pre-1971 ITC balances, which are required to be taken as an offset to rate base. Account 281 is not allocated to transmission. Transmission allocations are shown on Worksheet C.
F	Identified as being transmission related or functionally booked to transmission.
G	Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission on line 70.
Н	Consistent with Paragraph 657 of Order 2003-A, the amount on line is equal to the balance of IPP System Upgrade Credits owed to transmission customers that made contributions toward the construction of System upgrades, and includes accrued interest and unreturned balance of contributions. The annual interest expense is included on line 113.
1	Line 65 Removes the expense booked to transmission accounts included in the development of OATT ancillary services rates, including all of Account No. 561.
J	Removes cost of transmission service provided by others to the extent such service is not incurred to provide the SPP service at issue.
K	General Plant and Administrative & General expenses may be functionalized based on allocators other than the W/S allocator. Full documentation must be provided.
L	Expense reported for these A&G accounts will be included in the cost of service only to the extent they are directly assignable or allocable to transmission service. Worksheet J allocates these expense items. Acct 928 Includes Regulatory Commission expenses itemized in FERC Form-1 at page 351, column H. FERC Assessment Fees and Annual Charges shall not be allocated to transmission. Only safety-related and educational advertising costs in Account 930.1 are included in the TCOS. Account 930.2 includes the expenses incurred by the transmission function for Associated Business Development revenues given as a credit to the TCOS on Worksheet H.
М	
	Recoverable PBOP expense is based on actual annual PBOP costs, including charges from the AEP Service Corporation. The PBOP amounts are included in the Administrative and General total, and are based on current year expenses. The annual PBOP costs, including charges from the AEP Service Corporation.
N	Includes only FICA, unemployment, property and other assessments charged in the current year. Gross Receipts tax, Sales & Use taxes, local franchise taxes, and taxes related to income are excluded.
O	The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) (In 99) multiplied by (1/1-T). If the applicable tax rates are zero enter 0.  Inputs Required:  FIT =  21.00%  SIT=  7.81% (State Income Tax Rate or Composite SIT. Worksheet K) p =  0.00% (percent of federal income tax deductible for state purposes)
	Excess / (Deficit) Deferred Income Taxes will be amortized over the average remaining life of the assets to which it relates, unless the Commission requires a different amortization period. Recovery of permanent and flow through differences is limited
Р	The Texas Gross Margin tax is calculated on the Texas allocated revenue of the Company, reduced by cost of goods sold deduction to derive a "Gross Margin" for the Company. The tax rate of one percent is assessed on the resulting amount. The jurisdictional allocator is based on transmission demand allocators.
Q	Removes plant excluded from the OATT because it does not meet the SPP's definition of Transmission Facilities or is otherwise ineligible to be recovered under the OATT.
R	Removes transmission plant (e.g. step-up transformers) included in the development of OATT ancillary service rates and not already removed for reasons indicated in Note Q.
S	Includes functional wages & salaries incurred by parent company service corporation for support of the operating company.
Т	Long Term Debt cost rate = Long-Term Interest (In 133) / Long Term Debt (In 142). Preferred Stock cost rate = preferred dividends (In 134) / preferred outstanding (In 143). Common Stock cost rate (ROE) = 10.5%, the rate accepted by FERC pursuant to the settlement filed in Docket Nos. EL17-76 and EL18-199. It includes an additional 50 basis points for remaining a member of the SPP RTO. The capital structure of AEP Southwestern Transmission Co. will be based on the capital structure of SWEPCO until it establishes a stand alone capital structure AEP Oklahoma Transmission Company uses its own capital structure.
	The amount of eligible hedging gains or losses included in total interest expense is limited to five basis points of the capital structure. Details and calculations of the weighted average cost of capital are shown on Worksheet M. Eligible Hedging Gains
U	The cost of service will make a rate base adjustment to remove unfunded reserves associated with contingent liabilites recorded to Accounts 228.1-228.4 from rate base.
V	

O&M and A&G shall be adjusted to remove all regulatory asset deferrals and amortizations that have not been approved by FERC for inclusion in cost of service, and then to add back in FERC approved amortizations and deferrals. Negative amounts

If the company submits a Section 205 filing proposing to make adjustments to this formula rate cost of service template to remove assets and costs related to transmission facilities constructed and operated specifically for the purpose of delivering the

\*\* This is the calculation of additional incentive revenue on projects deemed by the FERC to be eligible for an incentive return. This additional incentive requirement is applicable for the life of this specific project. Each year the revenue requirement calculated for SPP should be incremented by the amount of the incentive revenue calculated for that year on this project.

<sup>1,035,552</sup> \*\* This is the total amount that needs to be reported to SPP for billing to all regions.

<sup>\*\*</sup> This is the calculation of additional incentive revenue on projects deemed by the FERC to be eligible for an incentive return. This additional incentive requirement is applicable for the life of this specific project. Each year the revenue requirement calculated for SPP should be incremented by the amount of the incentive revenue calculated for that year on this project.
